

Scalable Display Technologies and Immersive Display Solutions Inc. Bring Immersive Video to InfoComm09

June 16, 2009

Cambridge, MA & Acworth, GA-- Scalable Display Technologies, the leader in auto-calibration software for multi-projector displays and Immersive Display Solutions, Inc. (IDSI), the integration experts for curved and spherical display environments are pleased announce three joint demonstrations at InfoComm09.

Scalable Display and Immersive Display Solutions are jointly providing three immersive display environments utilizing Scalable Display's EasyBlend™ auto calibration software and IDSI projection environments to create three of the most compelling displays on the InfoComm show floor. These immersive displays can be seen in the Scalable Display Booth (# 4788, demonstrating a three projector, 170x50 degree personal Pano system), the Digital Projection International booth (# 2861, demonstrating a four projector, 220x85 degree four meter Pano system), and the Canon USA Inc. booth (# 5249, demonstrating a four projector 180x135-degree three meter dome system).

"Immersive displays are the next frontier in display technology and we are pleased to partner with IDSI the leader in immersive screens" said Andrew Jamison CEO Scalable Display. "Scalable's business model is built on partnerships and IDSI has been a great partner"

"Our partnership with Scalable Display Technologies has significantly broadened our base integration capabilities as a company" said George Forbes, President and Founder of Immersive Display Solutions, Inc. "The ability to design and install simple to operate, high resolution, multiple projector curved screens using EasyBlend™ has opened up a new class of projection system that we can now offer to our clients."

Scalable will be demonstrating in Booth # 4788.

About Scalable Display

Scalable Display Technologies, Inc., located Cambridge, Massachusetts, is a leading provider of auto-calibration software used to create edge-blended displays. Our EasyBlend software simplifies the creation of super-resolution, multi-projector displays of highest quality and scalable size. EasyBlend opens the door to wide-spread use of multi-projector displays for a new class of simulators based on off the shelf components, as well as supporting new forms of digital signage and data visualization tools.
